

Employer: Pacific Western Technologies Ltd.
Job Category: Environmental Scientist/Engineer, full time
Duty Station: Denver, Colorado
Salary: Depends on experience.
Send Resume to: careers@pwt.com

Education & Qualifications

- Bachelor's of Science degree in Environmental related field including Environmental Science, Geology, Geological Engineering, Civil Engineering or related disciplines.
- At least 5 years relevant experience in environmental consulting including field investigations, document review, community outreach/coordination, and project planning as relating to environmental investigation projects in support of CERCLA/Superfund Site RI/FS and remedial oversight projects.
- Strong communication skills and the ability to interact with property owners and tenants to achieve a successful conclusion for field investigations on residential and commercial properties as well as favorable client interactions.
- Strong computer skills and proficiency in MS Office Suite programs required. Must have strong writing skills (expect to provide examples), experience with AUTOCAD and GIS programs is desirable.
- Must be able to travel and work at remote locations. Field and property coordination work involves working year-round in varying weather conditions and be able to lift heavy loads (up to 50 pounds).
- Must be able to pass a physical exam and possess a valid Colorado driver's license. Must submit to medical monitoring and complete OSHA 40-hour training.

Required Experience

- Demonstrate a thorough understanding of the EPA RI/FS process as it applies to hazardous waste investigations, including preparation of project specific QAPPs, HASPs, specifications for field sampling and testing methodologies for various environmental media, contaminant of concern evaluation, development of DQOs, and an understanding of the EPA's risk assessment process.
- Ability to diplomatically participate in negotiations with property owners, clients and Regulatory Agencies. Successful candidate must demonstrate excellent negotiation skills including communicating and effectively working with colleagues, subcontractors, consultants, co-workers, and clients.
- Experience in environmental site investigations involving soil, groundwater, and other environmental media and performing field sampling, borehole drilling and logging etc.
- Experience in the independent preparation and/or review of technical reports, status reports and maintaining project databases.
- Conducting peer reviews and quality assurance reviews for colleagues as well as mentoring junior staff and directing field support.
- Managing change, as the client may change their mind about the project, and ensuring changes are resolved and relevant parties are notified.
- Working knowledge of EPA QA/QC standards, CERCLA guidance, and expectations. Analyze scientific data and do quality-control checks.
